

Fatimah Job Board server collector

Upload the whole project, not only index.html.

- `api/jobs.js`: server-side collector
- `api/cron.js`: daily scheduled endpoint
- `vercel.json`: daily Vercel Cron Remote works without credentials but public listings are delayed 24 hours. For fresher listings, add Vercel environment variables `ADZUNA_APP_ID` and `ADZUNA_APP_KEY` after registering with Adzuna. The board never submits applications automatically; it opens the original listing for review.
